

# Evario one Narrow

## The modern everyday slimline hospital bed.

The Evario one Narrow is the perfect choice for small hospital wards, outpatient units, or consulting rooms. It offers the popular 50/50 safety rails (other options available), ergonomic height adjustments, and a central 5th castor (optional) for smooth manoeuvrability. Easy to clean, maintain, and support earlier mobilisation, it reduces nursing strain and promotes faster patient recovery. Reliable, durable, and clinically tested beyond standards.

### Features

Narrow width (80cm) for small hospital wards, outpatient units, medical centres or consulting rooms.

Ideal for examinations, transfers or periods of rest.

Easy access pivoting 3/4 safety side rails (optional).

Split 3/4 safety sides & pivoting 3/4 safety sides also available

Reduce nursing MSK injuries with ergonomic waist-level working height

Reduce deconditioning & promote earlier mobilisation

Auto regression to reduce shear and friction

Central 5th castor available – smoother manoeuvrability

Easy clean for IPC in demanding healthcare environments

Rapid access to electronic control box & motor under backrest

### Specifications

Safe working load 250kg / 39.3st

Max. user weight 240kg / 37.7st

Height adjustment 36-80cm

External bed dimensions 89.5 x 214cm

Mattress dimensions 80 x 200cm

Under bed clearance 15.3 – 17.3cm

Protection height of pivoting 3/4 safety sides 38cm

Reverse-Trendelenburg 15.5°

Warranty 2 years

### Pivoting 3/4 safety sides for patients

Ensure complete patient safety with easy access pivoting 3/4 safety side rails (optional). Thoughtfully designed with clinical insight, these pivoting rails provide secure support, helping prevent falls while allowing caregivers effortless bedside access. The perfect balance of safety, comfort, and clinical practicality ensuring every patient receives total protection without compromise.

### Reduce deconditioning & promote earlier mobilisation

Reducing deconditioning starts with movement. The Evario one Narrow supports earlier sitting, standing, and walking, helping patients regain strength and independence sooner. With infinitely adjustable height settings and secure 3/4 pivoting side rails for mobilisation support, each patient can safely enter and exit the bed at their optimal ergonomic height, promoting greater confidence, quicker rehabilitation, and speedier discharge.

### Optional 5th castor - small wheel, big impact

The optional central 5th castor acts as a pivot, giving smooth, straight tracking & easy navigation in tight spaces. Less effort for staff means fewer awkward pushes and pulls, reducing the risk of back, shoulder, & wrist injuries and protecting against musculoskeletal injuries. Small wheel, big impact ensuring hospital beds are easier & safer to handle in a demanding hospital, outpatient unit, or medical centre.

### Reduce musculo-skeletal injuries

Back pain and musculoskeletal injuries (MSKs) are among the leading causes of staff absence in healthcare. The Evario one Narrow helps protect your team with an ergonomic waist-level working height (adjustable up to 82cm). By reducing strain, bending, and stress on joints, the Evario one Narrow actively supports long-term nurse wellbeing and a safer, more efficient care environment.

### Infection Prevention & Control (IPC)

- Low-recess design saves time, physical effort and resources for faster recycling
- Flat-surface design with good hygiene properties
- Concealed cable routing
- Mattress base elements can be removed for reprocessing
- Uncluttered chassis for easy cleaning

### Optional Push Bars

The push bar transport handles can be mounted to either the headboard or footboard. Finished in durable, crystal white powder-coated steel, it is fully removable with built-in protection against accidental release, providing a secure and comfortable grip for safe patient transport.
